## (54) PRODUCTION OF WATER-ABSORBING POLYMER HAVING IMPROVED WATER-ABSORPTIVITY

## (57) Abstract:

PURPOSE: To obtain a water-absorbing polymer having excellent saturated water- absorption, water-absorbing rate and gel strength and suitable as sanitary material, etc., in high efficiency by polymerizing an aqueous solution of an  $\alpha,\beta$ -unsaturated carboxylic acid, etc., under specific condition and treating the obtained water-absorbing polymer with a cationic surfactant, etc.

CONSTITUTION: This water-absorbing polymer can be produced by polymerizing an aqueous solution of one or more monomers selected from  $\alpha,\beta$ -unsaturated carboxylic acid (e.g. acrylic acid), its derivative and their salt by a W/O-type reversed-phase suspension polymerization using hydrophobic inorganic fine powder as a polymerization dispersion agent and treating the surface of the obtained water-absorbing polymer with a cationic surfactant (e.g. dioleyldimethylammonium chloride) and hydrophilic inorganic fine powder.

## LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]
